As a senior in high school, I have been asked many times what drives me to pursue a college education and my career goals. For me, the answer is clear: my desire to become an architect and make a difference in my community.

Growing up in a single-parent household, my mother has always been my role model and inspiration. She worked long hours to provide for our family, and I have seen firsthand the sacrifices she made to ensure that my siblings and I had everything we needed. Despite the challenges she faced, she always encouraged us to pursue our dreams and never give up on our goals.

My interest in architecture began when I was young, and I became fascinated with the way that buildings were designed and constructed. As I got older, I started to realize that architecture was not just about creating beautiful structures, but it was also about solving problems and making a positive impact on people's lives. I became determined to pursue a career in this field, as I saw it as a way to combine my passion for design with my desire to help others.

I am currently taking courses in math, physics, and art, as I know these subjects are crucial to developing the skills necessary to succeed in architecture. I am also deeply committed to giving back to my community through volunteer work. For the past year, I have been volunteering at the local library, helping to organize and run events for children and teens. This experience has allowed me to develop valuable skills in leadership, teamwork, and communication, while also giving me a sense of fulfillment and purpose.

Aside from my academic and extracurricular pursuits, what truly drives me is the desire to make a difference in the world. I see architecture as a way to not only create beautiful spaces but also to address pressing issues such as sustainability and social justice. I am passionate about using my skills and knowledge to create buildings that are not only aesthetically pleasing but also functional and environmentally responsible.

Going to college is a crucial step towards achieving my goals. I know that pursuing a degree in architecture will require hard work and dedication, but I am prepared to put in the effort to make my dreams a reality. I am excited to learn from experienced professionals in the field, to collaborate with my peers, and to be part of a community that shares my passion for design and innovation.

Ultimately, what drives me is a desire to create a better world through design. I believe that architecture has the power to transform the way we live, work, and play, and I am eager to be a part of that transformation. Whether through sustainable design, innovative technology, or community engagement, I am confident that I can make a positive impact in the field of architecture and beyond.
